

VISTOOLKIT

VIRTUAL INSTRUMENT
SOLUTION TOOLKIT

VISToolkit®

Controlar
innovating industry

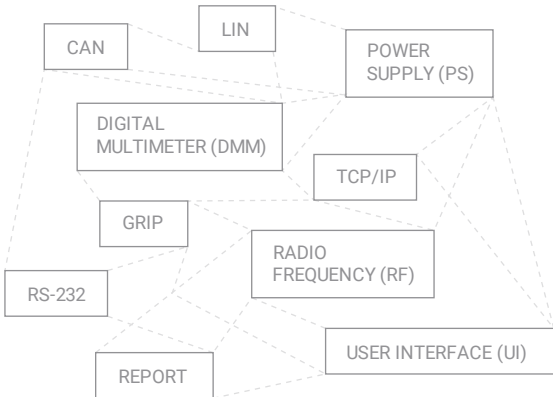

V(irtual) I(nstrument) S(olution) Toolkit is designed to simplify the use of measurement instruments, removing the need for user configuration and programming.

This way, the user can focus on building a solution, disregarding the programming layer.

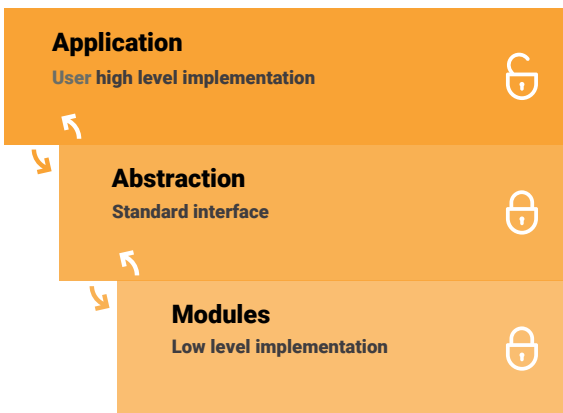

For this purpose, VISToolkit provides several modules adapted to each need using a simple function to receive parameters and return a response.

While VISToolkit does the work, the user handles results.
